The Finnish Social Science Data Archive has decided to present the very first FSD Data Award to Michail Galanakis.

Galanakis has taken data management and research ethics commendably into consideration already when planning data collection. When conducting the interviews, he asked the interviewees' written consent for archiving and informed them that the data will be preserved at the Finnish Social Science Data Archive. Galanakis also presented his data archiving plan to a local research ethics board in Canada and followed the FSD's Data Management Planning guidelines when processing the data. Moreover, Galanakis has mentioned the data archive in the publications based on the data, thus promoting data transparency.

The Data Award is presented to a person, research group or organisation in recognition of exemplary data management and attention given to data lifecycle when collecting, organising and archiving data.

Good data management means that the research data and description information (metadata) related to the data have been created, stored and organised in a way that keeps the dataset accessible and reliable throughout its life span. Archiving and enabling reuse of data are an essential part of data lifecycle.

The Data Award is an acknowledgement of quality data management, and the awardee receives a memento and a diploma. The Award is presented on 17 September.

The awarded memento for 2014 is a cake server, which is hammered from recycled (nickel) silver tablespoon by Beloved {by} Brunou. Handwashing is recommended.
